sister - genetic testing

well at least she is relatively safe. I am thinking a bit of her diagnosis persistance (other than sheer will) have a bit of momentum from genetics .. so many things in our genome missing potentially missing for siblings.... MTHFR gene mutation, no glutathione pathway (neither of our parents had passed that on). poor processing of Vit A, B6, C , D, E . Deficiency in D and many other things leads to schizophrenia.. thyroid issues are hereditary also, poor processing of hormones by the liver as well so if her hormones are unbalanced her liver wont clear well. If she hasnt dealt with her psychological issues she is highly vulnerable I am sure.. interesting in the last photo I saw of her she looked like a raging alcoholic energetically so probably highly toxic somehow.. she did do a lot of painting.. I have a friend who has too and ended up having to do a lot of intense detox due to heavy metals and bi products..

What are the complications of a MTHFR gene mutation?

http://glutathionepathway.com/suzy-cohen-on-chronic-illness-and-glutathione/

http://ghr.nlm.nih.gov/gene/MTHFR

The protein encoded by this gene catalyzes the conversion of 5,10-methylenetetrahydrofolate to 5-methyltetrahydrofolate, a co-substrate for homocysteine remethylation to methionine. Genetic variation in this gene influences susceptibility to occlusive vascular disease, neural tube defects, colon cancer and acute leukemia, and mutations in this gene are associated with methylenetetrahydrofolate reductase deficiency.[provided by RefSeq, Oct 2009] - See more at: http://www.cancerindex.org/geneweb/MTHFR.htm#sthash.jFMNeyYP.dpuf

Leukemia? some symptoms match - not all - blood work is all "fine". With lyme - blood work all comes out fine, yet you have symptoms. My guess is not, but it is worth a question.

occlusive vascular disease? good possibility

http://www.merckmanuals.com/home/heart-and-blood-vessel-disorders/peripheral-arterial-disease/occlusive-peripheral-arterial-disease

I don't know if the tests I have had would rule this out. What tests?

It does seem vascular. I have had shooting pains through veins, almost feels like something is stuck and then gets unstuck, in my right leg, down my left forearm, up my neck on my ride side there is a weird consistent sensation that comes and goes.

Colon cancer?

Some symptoms match

http://www.cancer.org/cancer/news/features/signs-and-symptoms-of-colon-cancer

I imagine my blood tests would have ruled this out.
